Good Morning All:

Hope you had a good weekend.

The goal for the week is to complete the molecular architecture unit. I will be asking you to complete #1, #2 and #3 on the tests (Test #1 has its #3 and #5). The remainder of the test questions are up to you.

There is a video link on the website in the purple area on the top left. Please refresh to get the colour on the website to change. Shapes should now be in green for done.

I will be providing a quiz on question #2 tomorrow (Tuesday), where I will simply ask you to classify a list of formula as seen in any question #2 on all of the practice test.

I will provide a question #3 on Thursday that I am going to ask you to write or type out and send to me. If you have the pdf thing working on your phone that is great. Any file size will do. If you do not, I will take your answer via email or via attachment or via cloud document or even via paper airplane. As you may know, Friday is a PD day and I will not be contacting you (although I may respond to your emails if the school does not keep me too busy). You can use the Friday and the weekend to complete and submit this question.

As for the remainder of the content of the test and unit, it is up to you to decide how much you want to learn. Of course I would recommend to learn all of it, because that is what the chemistry enthusiast is me says. If you want a good challenge, I would look at the orbital hybridization theory. It is difficult. You can find good coverage for it the text - see section 4.2 starting on page 231. There is also some information of the website that I have coloured a light purple (mauve I believe is the correct name for this colour).

I will have another video tomorrow or Wednesday that deal with a question #3 from the tests.

Please check in and provide some feedback in the third question if you feel so inclined.

Hope this finds you well.

Mr. Schlenker
